

Sr.	Project	Details	Assigned Group
1	Smart Campus Security and Surveillance System	Develop a surveillance system using smart cameras, facial recognition, and intrusion detection to enhance BRACU campus safety while ensuring efficient monitoring.	Group 1
2	Intelligent Agricultural Crop Monitoring System	Design an intelligent monitoring system equipped with cameras and other sensors to monitor crop health, detect diseases, and estimate irrigation requirements in Bangladesh.	Group 2
3	Intelligent Water Quality Monitoring Network for Urban Water Supply	Design a distributed sensor network to monitor pH, turbidity, residual chlorine, and contamination in real time across the Dhaka city water distribution system.	Group 3
4	AI-based Traffic Management System	Design an AI system that analyzes real-time traffic data from cameras and sensors to optimize traffic flow in Dhaka city, reducing congestion and improving road safety.	Group 4
5	Smart Power Distribution Monitoring System for Urban Substations	Design an IoT-based system for real-time monitoring of transformer health, feeder loading, and power quality to improve grid reliability and reduce outages in Bangladesh.	Group 5
6	Smart Bus Fleet Monitoring and Passenger Information System	Design a GPS- and IoT-enabled platform providing real-time vehicle tracking, estimated arrival times, and fleet performance analytics for local bus services in Dhaka city.	Group 6
7	Drone-Based Transmission Line Inspection and Vegetation Monitoring System	Design a UAV-based inspection system that captures high-resolution images, identifies damaged components, and detects vegetation encroachment along transmission corridors in rural areas of Bangladesh.	Group 7
8	Underwater Exploration Robot	Design a remotely operated or autonomous underwater vehicle for marine research and exploration in Bangladesh. The vehicle should be capable of withstanding high pressure and equipped with cameras, sensors, and other data collection tools.	Group 8
